

## Frequently Asked Questions

**Q: What is Precise Comfort™ technology?**

**A:** Precise Comfort technology is an operating and control system that allows a furnace to automatically adjust airflow and heat output in increments as small as 1% to match a home's precise comfort requirements. It operates like your car's cruise control, making small, seamless adjustments to meet varying demand, all while improving overall efficiency.

**Q: What is AirFlex™ technology?**

**A:** AirFlex technology allows your Lennox dealer to adjust the G71P's heating, cooling and fan-on mode blower settings to accommodate your lifestyle, home design and geographic location. For example, your dealer can choose a setting that increases airflow during fan-on operation to compensate for cathedral ceilings or long duct runs. If you live in a humid climate, your dealer may choose a slower fan-on setting that helps minimize off-cycle re-humidification.

**Q: The G71P claims to be “the quietest furnace you can buy.” Other furnace manufacturers make similar claims. Whose claim do I believe?**

**A:** The next time you see another manufacturer's furnace claiming to be the “quietest,” you'll likely also see that the claim fails to reference what unit was tested, how it was tested or by what standard it was tested. All Lennox sound claims include a disclosure explaining what Lennox® product was tested, as well as the testing standard used.

**Q: Every time my current furnace cycles on, I hear a rush of air that's so loud, it wakes me from my sleep. Does the G71P solve that problem?**

**A:** Yes. The G71P's variable speed motor slowly—and quietly—ramps up to speed, with no sudden rush of air. It ramps down slowly, too, and either cycles off or continues running in a slow, quiet fan-on mode.

**Q: I've heard about a “dual-fuel” system that can help me save money on my utility bills. Does the G71P work in a dual-fuel application?**

**A:** Yes. Increased system efficiency is possible when you pair the G71P gas furnace with an electric heat pump. This dual-fuel combination helps control heating costs by seamlessly alternating between the two energy sources, depending on outdoor conditions and prevailing energy costs. The G71P's energy-efficient blower motor helps control cooling costs, too.

**Q: My children have severe allergies. Can the G71P help reduce contaminants in my home's air?**

**A:** Yes. When you set your thermostat to “FAN,” the G71P is able to continuously maintain a slow circulation of air throughout your home. That constant low-speed fan operation increases the effectiveness of your indoor air quality products such as filters and germicidal lights, allowing them to capture and remove more contaminants.

**Q: What type of warranty coverage does the G71P provide?**

**A:** The G71P gas furnace includes a limited lifetime warranty on the heat exchanger and a 10-year limited warranty on all remaining covered components. Extended warranties are also available.
